

Software Design Services

At-a-Glance

ISM provides customized software solutions, web development, software migration services as well as application maintenance, upgradation, and integration services for all your company's software needs.

ADVANTAGES

- * **Develop Customized Enterprise Applications**
- * **Cutting-edge Web Development**
- * **Migrate Databases**
- * **Enhance Legacy Systems**
- * **Develop Flexible Mobile Applications**
- * **Timely and Affordable Programming**

ISM works with you to determine your requirements, how it should run, and which business methodologies are to be applied. ISM then offers a framework that precisely fits your needs. In managing your projects, ISM remains transparent, reliable, and timely.

Innovative Software Solutions

ISM's customized Software Design Services bring innovative solutions and value to your organization and clients. ISM has the expertise to deliver cost-appropriate, stable software solutions to match your requirements in Application Development, Integration and Customization, Migration and Enhancement of Legacy Applications, Application Support and Improvement, and Project Rescue.

The benefits of custom software application development allow our client's businesses to innovate so that the targeted user group is best served and they can replace/modify inefficient IT processes with custom-made software applications for better business results.

ISM's Software Design Services include:

Application Development

ISM's focus is to create customer-oriented applications. Our Programming Unit analyzes our clients' current IT processes to ensure compatibility between existing systems and custom-developed applications processes constantly keeping in mind broader objectives. In addition to application development, we also provide related services such as application support, maintenance, re-engineering, and testing. ISM has the expertise for developing applications using open source and proprietary technologies that allows us to execute the most challenging and complex projects that satisfy customer requirements.

Web Development

ISM Services, Inc. uses the latest web development technologies for web application development and has achieved commercial success delivering high performance web applications with complex functionalities. Our services include web enhancement of legacy system, Internet strategy development, e-commerce web development, and business process management. Our web development process walks through the entire process of building dynamic, secure, commercial web sites, and applications. ISM's well-structured programming techniques enable us to update our advanced applications quickly and smartly, so that the other modules of the project are not affected with any future updates. ISM Services, Inc. provides timely, efficient, and affordable programming services to provide professional web programming services for both new and existing dynamic websites

Software Migration

A large number of database-driven legacy desktop software and solutions that are being used all over the world can get new birth when moved on to new Internet technologies. The need for migration of applications or databases in enterprises arises from changes in business demands or technology challenges either to improve

operational efficiency or to manage risk. The need is to preserve established business rules and practices in the old system at the same time adapting new features/functionality.

Some common problems faced by customers who requires migration to newer technologies include:

- Maintenance problem, complex architecture, and difficult to deploy
- Technology obsolete, difficult to find resources
- Scalability problems
- Business logic mix-up
- Integration problem with other systems
- Difficult to upgrade the system for new user requirements

ISM Services, Inc. can provide services to migrate database-driven legal systems to new integrated website software solutions that are reliable, robust, scalable, and affordable. ISM Services, Inc. also provides data migration services to ensure that data from your existing systems is migrated before launch to systems built by ISM Services, Inc.

Application Maintenance, Up-gradation, and Integration

A good website needs strategic thinking, appropriate designing, quality process implementation, internet marketing, and regular maintenance. As needs of business changes, as well as additional features are required to be developed. If you have an existing corporate website, but would like to improve it to attain global standards and optimal search engine results, ISM Services, Inc. can provide these services. Our up-gradation and integration services include expansion of your corporate website towards a defined online strategy, redesigning your website using 'best practices' worldwide in web designing, integrating your current offline operations to your corporate website, troubleshooting and bug fixing, performance enhancement and designing, and building industry specific Internet applications.

Services and Solutions

ISM Services, Inc.'s expertise, knowledge, and services sets us apart in our capability to partner with clients and achieve strategic and operational goals. Our team of experts brings the knowledge gained from a wide range of projects. We recognize that our future is based on our ability to establish and maintain long-lasting relationships with our clients.

Adapting Technology to a Changing World
