

Key Control

At-a-Glance

Key Control creates a key inventory that includes the disposition of keys, assignment to personnel, cylinder and key associations, as well as door and cylinder associations. The Key Control Module provides comprehensive graphical data for access management within specified time periods, in short, who had access to what and when.

ADVANTAGES

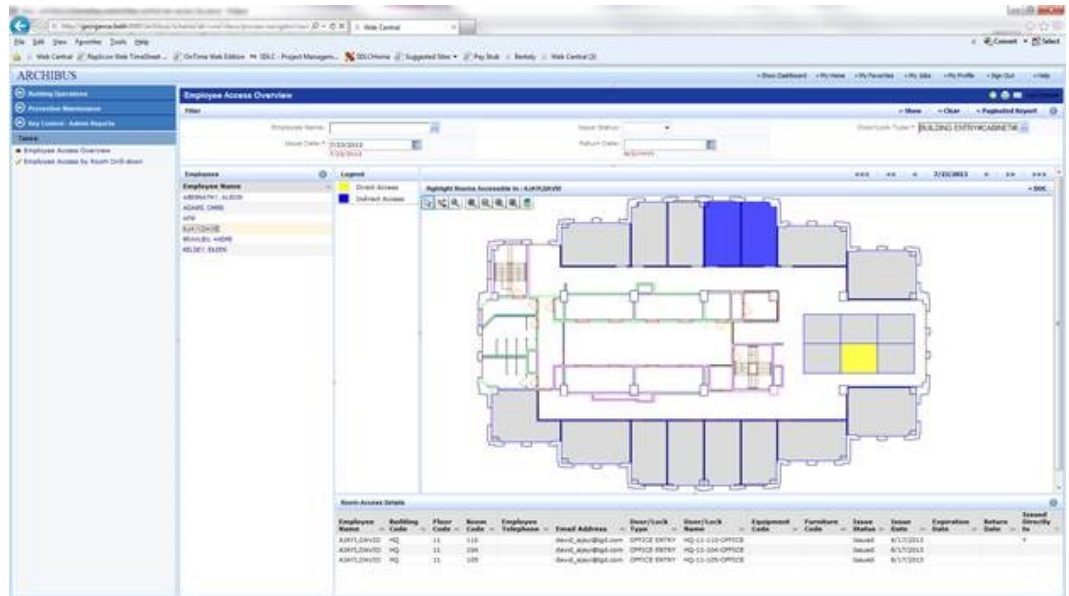

- * Track Key Locations
- * Pair Key Data with Facility Management Data
- * Track Personnel Access
- * Improve Accountability

Since identical cylinders and keys can be installed and issued throughout your facility, an employee may have indirect access to many areas. It is important to know who had access to what and when, so even if an employee returned their key, did they have access to a certain area within a certain time frame.

The Employee Access Overview will provide you with that information in an easy-to-read dashboard.

Manage All Your Keys

ISM Services, Inc. has created a Key Control Module within ARCHIBUS that provides an accurate electronic inventory of your physical keys. This enables you to track and manage key location, track personnel access throughout your facility, and to pair physical key data with the facility management data already in your ARCHIBUS system (e.g., personnel, rooms, equipment, and furniture tables).

ISM's Key Control for ARCHIBUS offers:

Background Data

Background data helps you track and update your key data by establishing repeatable information such as: master key systems, cylinder types, cylinder systems, cylinder colors, door or lock types, key types, and keyway types.

Administration Process

Manage key control cabinets and authorized users, manage cylinders, apply cylinders to doors or locks, apply keys to cylinders, and issue keys to personnel. Enable authorized key cabinet administrators to manage keys within their assigned cabinet. Print signature cards during the key issuing process. Track access through the Employee Access Overview and the Employee Access by Room Drill-down reports.

Key Request

The Key Request process enables personnel to request the key types specified by the administrator as well as view all the keys assigned to them.

Data Import/Export Process

Easily import and export data for use in other applications.

Founded in 2004, ISM Services, Inc. quickly established itself as a leader in the development and implementation of Comprehensive Facilities Management Services. With an ever-growing staff of hand-picked experts, we now offer a wide variety of services. Our solutions are delivered with the right combination of leading-edge technologies, years of experience, and unparalleled support.

Our Mission is to provide our customers with comprehensive, proactive Programs and Services that exceed requirements and are delivered on time, every time; have personnel with the vision and knowledge to recognize the future needs of our customers and develop new applications to meet their needs; provide best-in-field and best-in-business practices for streamlined, efficient planning and execution; and are the best value for the money.
